

Netbeans Tutorial

File → New Project

New Java Application

Steps

1. Choose Project

2. **Name and Location**

Name and Location

Project Name:

JavaApplication 16

Project Location:

C:\Users\abcdef\Documents\NetBeansProjects

Browse...

Project Folder:

C:\Users\abcdef\Documents\NetBeansProjects\JavaApplication 16

☐ Use Dedicated Folder for Storing Libraries

Libraries Folder:

Browse...

Different users and projects can share the same compilation libraries (see Help for details).

☒ Create Main Class

javaapplication16.JavaApplication16

☒ Set as Main Project

< Back

Finish

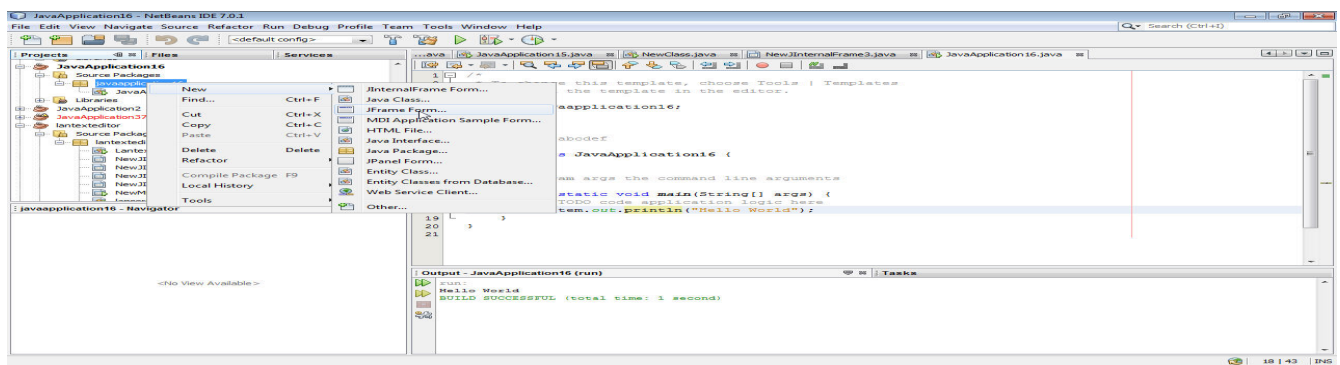

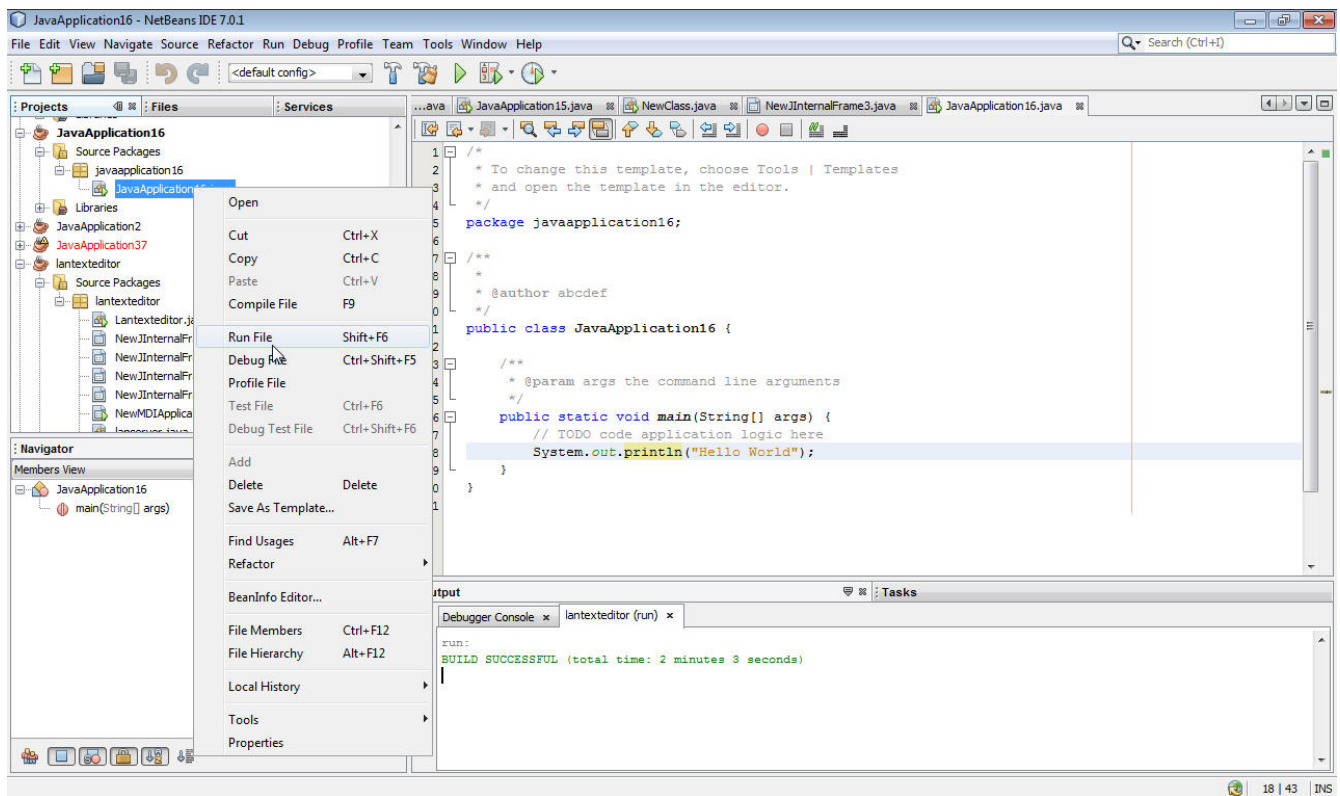

Cancel

Help

```
/**
 * To change this template, choose Tools | Templates
 * and open the template in the editor.
 */
package javaapplication16;

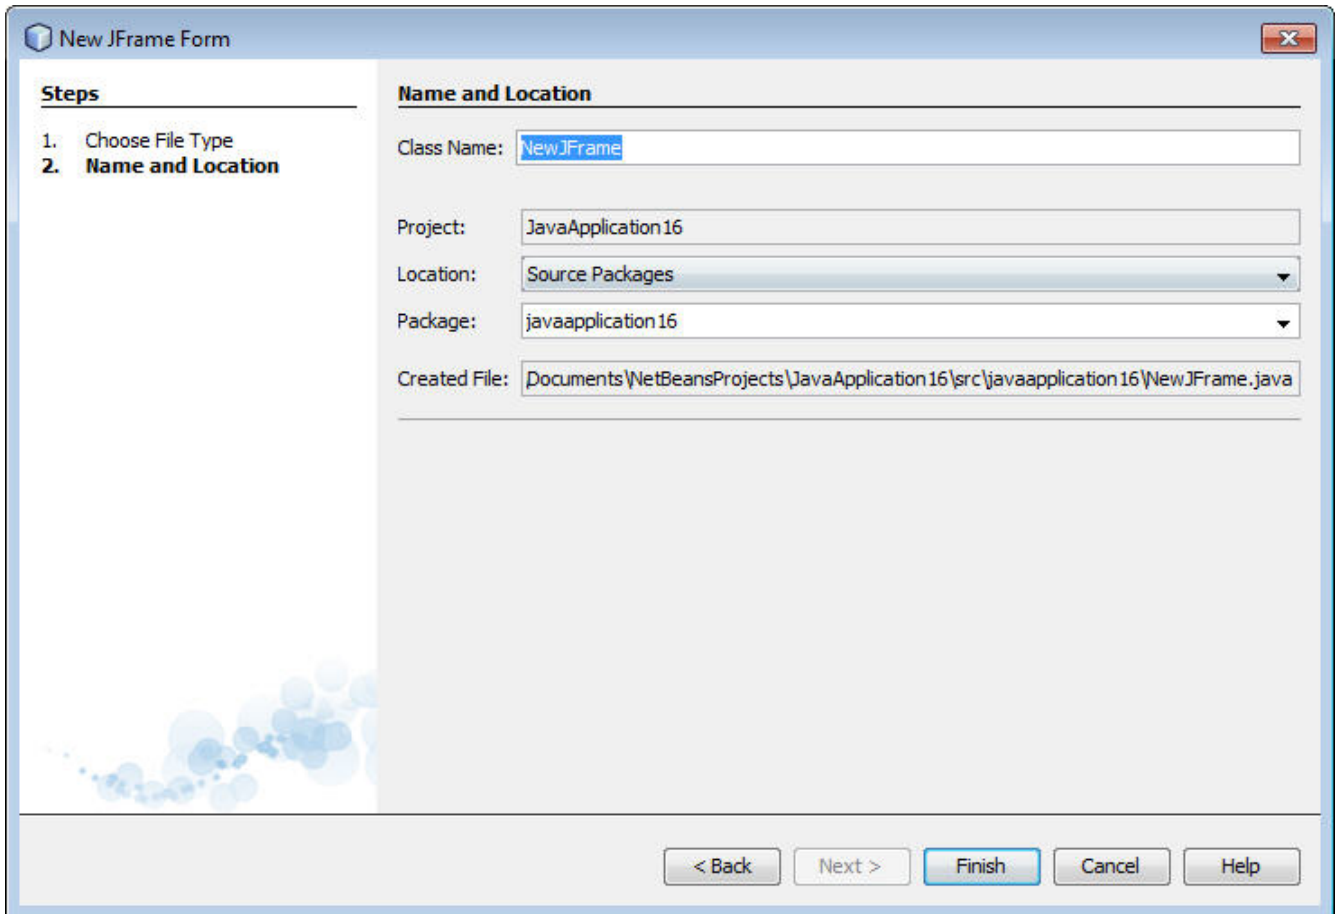

/**
 *
 * @author abcdef
 */
public class JavaApplication16 {

    /**
     * @param args the command line arguments
     */
    public static void main(String[] args) {
        // TODO code application logic here
        System.out.println("Hello World");
    }
}
```

Insert a New JFrame

Right click on the package and select new JFrame

The image shows a 'New JFrame Form' dialog box in NetBeans. The dialog is divided into two main sections: 'Steps' on the left and 'Name and Location' on the right. The 'Steps' section lists two steps: '1. Choose File Type' and '2. Name and Location', with the second step being the current one. The 'Name and Location' section contains several input fields: 'Class Name' (set to 'NewJFrame'), 'Project' (set to 'JavaApplication16'), 'Location' (set to 'Source Packages'), 'Package' (set to 'javaapplication16'), and 'Created File' (showing the full path: 'Documents\NetBeansProjects\JavaApplication16\src\javaapplication16\NewJFrame.java'). At the bottom of the dialog, there are five buttons: '< Back', 'Next >', 'Finish' (which is highlighted with a blue border), 'Cancel', and 'Help'.
