This Tutorial will explain you following concepts about Java Programming Language

- Refactoring
- Interface
- Import
- Package
- Annotation

Refactoring in Java means if you rename a class or a package in a Java Project through a Java IDE all occurrences of that class and package will be updated in the Project.

Interface in Java means if any Java Class implements an interface it must include definitions for all the methods in the interface. Java Class should also

Import statement means if you import a class or package in another class, you can use all classes in the package or a single class you have imported in another class.

import java.sql.*;

above statement can use all the classes inside package java.sql

Package means a folder or a directory in Java

Annotation means meta data about a class, object, constructor or a method.

metadata means information about a class, object, constructor or a method.
